Orange text = line by line Analysis
Green text = Comments from programing phase
"Red Text" = Words in the strings

```cpp
#include <iostream>
using namespace std;                    Important preprocessor steps
int main() {
        makes a string for the restaurant name
        std::string Name = "Tortalino's Italian Restaurant";

        makes a string for the appetizers and makes a new line
        std::string Appetizer = "Appetizers: Mozzarella sticks.\n";
        // Adds cost value of 2 dollars

        makes a string for the entrees and makes a new line
        std::string Entree = "Entree: Pasta with Italian Meatballs.\n";
        // Adds cost value of 5 dollars

        makes a string for the desserts and makes a new line
        std::string Dessert = "Dessert: Cannoli.\n";
        // Adds cost value of 1 dollar

        prints the string(name)to the console/screen and makes a newline with endl
        std::cout << Name << endl;

        prints the strings (Appetizer, Entree, Dessert) to the console/screen
        std::cout << Appetizer << Entree << Dessert;
        //total cost 8 dollars

        Ends int main by returning 0
        return 0;
}
```
